

Skyliner® Technical Bulletin 010:
Skyliner® Double-Face Tape Adhesive Alternative

Skyliner® double-face tape is a two-sided, 2" wide, 225 μ thick, PVC film tape, with tackified acrylic adhesive. This double-faced tape is an alternative to the brush-on liquid adhesive, supplied standard with the Skyliner System. The tape comes in 165 foot rolls, has excellent high tack and immediate adhesion properties, plus good bonding performance on rough or dusty surfaces. Double-face tape is only recommended in install temperatures above 40° F. The double-faced tape has been tested and complies with OSHA leading-edge fall protection when used in conjunction with the Skyliner Safety Band, Safety Clips and manufacturer's installation instructions. Double-faced tape can be ordered as an alternative to liquid adhesive on any Skyliner order.
