

Skyliner® Technical Bulletin 016: **Skyliner® Fabric Painting**

The Skyliner® Fabric System uses a proprietary HPDE (high density polyethylene) scrim which is woven into fabric. The fabric contains plasticizers and fire retardants that may cause the paint to not adhere permanently. As such, painting of the Skyliner fabric will void its warranty. Bay Insulation Systems cannot say how certain types of paints may react to the fabric, as there are some paints being sold as good for plastic, but our experience is that one will not get good coverage, and over time, paint flaking is likely. If the fabric must be painted, we suggest taking a small piece of Skyliner fabric to a paint store for a test.
