

Bay Insulation Systems Introduces New Skyliner™ Insulation System, a High-Performance System for Metal Building Roofs and Walls That Brightens Buildings, Meets New Energy Codes, Reduces Construction Costs, and Meets OSHA Leading Edge Fall Protection Requirements

Bay Insulation has created a brighter future for the metal-building industry with the introduction of its new Skyliner™ Insulation System at the Butler National Sales Meeting. A liner system for metal building roofs and walls, Bay's advanced commercial solution delivers energy savings, worker protection, and installation cost-savings that surpass industry standards and expectations for insulation system performance.

The Skyliner™ insulation system is composed of a premium, woven, HPDE Scrim liner that is .02 perm-rated vapor retardant for thermal insulation. Liner features a brilliant white reflective surface that brightens buildings, improves lighting efficiency, and reduces energy usage. The bright white material, with sky-blue backing, delivers a light reflectance value of 84.

Tested extensively, The Skyliner™ System (liner, banding, clips, adhesive, NAIMA Insulation) meets or exceeds new energy codes and increases building energy efficiency with high R Values and low U Factors.

The Skyliner™ System is designed for easier erection, saving time and money on construction costs. The fabric covers purlins (roofs) or girts (walls), and its unique fabric dispensing system (from a core), adhesive dispensing system, and banding and clip method, are designed for quick deployment. Skyliner™ increases on-roof productivity and reduces field labor costs. And a brand new, exclusive Skyliner™ addition, "New" Flange Brace Covers, can be included in the Skyliner™ package to ease and speed up installation.

The exclusive safety clip, banding, and fabric system maximize safety on the roof. Skyliner™ meets OSHA standards for both passive-fall restraint and active-fall protection to provide leading-edge worker safety.

The result is a brilliant white, energy-efficient roof or wall surface that delivers maximum safety (roof), tested thermal efficiency, and exceptional money-saving advantages for both construction companies and building owners.

Skyliner™ is ideal for new or retrofit applications. It meets or exceeds all codes and standards, including ASHRAE, IECC, California Title 24, Washington, Oregon, and Florida.

To learn more about Skyliner™, ask your Bay Insulation Systems District Manager, visit www.skylinersystems.com, or call 1-844-999-7153.

The Bay Family of Companies produces and distributes commercial and industrial fabricated and metal building insulation products to satisfied customers around the country. Its metal building insulation division, Bay Insulation Systems, ranks as the largest producer and distributor of metal building insulation materials and accessories, and is the largest producer of custom-laminated metal building blanket insulation. Headquartered in Green Bay, Wisconsin, The Bay Family of Companies operates 75 locations throughout the United States.
